Post-Keynesian Militarism

Keynesianism to Growth: From Military

Globalisation and US Prison

RUTH WILSON GILMORE

upwards of 80 per cent were, at some time in their case, represented by state-appointed lawyers for the indigent; in short, as a class, convicts are the working or workless poor. At a cost of 280-350 million dollars each, California has completed twenty-two new prisons since 1984. The new prisons, plus the state’s twelve previously existing facilities, plus four new prisons being planned, plus internal expansions, plus space contracted with public or private providers, will give the system a lockdown capacity of more than 200,000 by 2001, according to data from the California Legislative Analyst’s Office and the CDC.

But California’s prison expansion has to be situated in the political-economic geography of globalisation if its full significance is to be understood. A new kind of state is being built on prison foundations in the world’s seventh or eighth largest economy. The importance of California is not that it represents the average case of current conditions throughout the US but, rather, that the State stands in as a plausible future for politics within and outside national borders. California has long served as an activist exemplar that others keenly emulate.

Why prisons: dominant and counter explanations

The media, government officials and policy advisers endlessly refer to the moral panic over crime and connect prison growth to public desire for social order. In this explanation, what is pivotal is not the state’s definition of crime, per se, but rather society’s condemnation of rampant deviant behaviour – thus a moral not (necessarily) legal panic. The caprilising of crime to US public anxiety number one, even when unemployment and inflation might have garnered greater worry in the recessions of the early 1980s and the early 1990s, suggests that concerns about social deviance overshadowed other, possibly more immediate issues.

However, by the time the great prison round-ups began, crime had started to go down. Mainstream media reported the results of statistics amply gathered and published by the Federal Bureau of Investigation (FBI) and the Bureau of Justice Statistics (BJS). In other words, if the public had indeed demanded crime reduction, the public was already getting what it wanted. State officials could have taken credit for decreasing crime rates without producing more than a million new prison beds. But the beds are there.

Another explanation for the burgeoning prison population is the drug epidemic and the threat to public safety posed by the unrestrained use and trade of illegal substances. Information about the controlling (or most serious) offence of prisoners supports the drug explanation: drug commitments to federal and state prison systems surged 975 per cent between 1982 and 1996. Therefore, it is reasonable to conclude that widening use of drugs in the US in the late 1970s and early 1980s provoked prison expansion. According to this scenario – as news stories, sensational television programmes, popular music and movies and politicians’ anecdotes made abundantly clear – communities, especially poor communities of colour, would be more deeply denigrated by addiction, drug dealing and gang violence were it not for the restraining force of prisons. The explanation rests on two assumptions: first, that drug use exploded in the 1980s, and second, that the sometimes violent organisation of city neighbourhoods into gang enclaves was accomplished in order to secure drug markets.

In fact, according to the BJS, illegal drug use among all kinds of people throughout the United States declined precipitously, starting in the mid-1970s. Second, although large-scale traffic in legal or illegal goods requires highly organised distribution systems – be they corporations or gangs – not all gangs are in drug trafficking; for example, according to Mike Davis, in Los Angeles, an area of heavy gang and drug concentration, prosecutors in the late 1980s charged only one in four dealers with gang membership.

A third explanation blames structural changes in employment opportunities; these changes have left large numbers of people challenged to find new income sources, and many have turned to what one pundit called ‘illegal entitlements’. In this view, those who commit property crimes – along with those who trade in illegal substances – reasonably account for a substantial portion of the vast increase in prison populations. Controlling offence data for new prisoners support the income-supplementing explanation: the percentage of people in prison for property offences more than doubled since 1982. But, at the same time, incidents of property crime peaked in 1980; indeed, the decline in property crime pushed down the overall crime rate.

More recently, as both print and electronic media have started again to headline annual federal reports about long-term drops in crime (still falling since 1980) and as elected and appointed officials have started to take credit for the trends, the explanation for bulging prisons centres on the remarkable array of longer and stiffer sentences now doled out for a wide range of behaviour that used to be punished differently, if at all. This explanation, tied to but different from the ‘moral panic’ explanation, proposes that while societal deviance might not have exploded after all, active intolerance pays handsome political dividends. The explanation that new kinds of sentences (which is to say the concerted action of lawmakers) rather than crimes in the streets, produced the growth in prison, is a post facto explanation that begs the question. Where did the punitive passion come from in the first place? While all the dominant accounts carry some explanatory power, there is a huge hole at their centre. Who is being punished, for what, and to what end? If crime rates peaked before the proliferation of new laws and new cages, what work does prison do?
There are two major counter explanations for prison expansion. The first charges racism, especially anti-Black racism. The second focuses on the economic development and profit-generating potential that prisons promise, suggesting that military Keynesianism is giving way to, or complemented by, careered Keynesianism. As with the dominant explanations, there is a great deal of truth in these claims. The statistical inversion, by race, of those arrested (70 per cent white) to those put in cages (70 per cent persons of colour) quantitatively indicates that the system punishes different kinds of people differently; qualitatively, the social lives of individuals and families caught up in the system graphically illustrate this uneven development. It is also true that communities and industrial sectors are increasingly dependent on prisons for governmental, household, and corporate income. But these explanations do not show us how prison — and the industrialised punishment system that is the heart of the prison industrial complex — achieved such a central place in structuring the state and shaping the landscape, nor do they show us whether the state is a variation on the Keynesian theme or something new to globalisation.

In my view, the expansion of prison constitutes a geographical solution to socio-economic problems, politically organised by the state which is itself in the process of radical restructuring. This view brings together the complexities and contradictions of globalisation at home, by showing how already existing social, political and economic relations constitute the conditions of possibility (but not inevitability) for ways to solve major problems. In the present analysis, "major problems" appear, materially and ideologically, as surpluses of finance capital, land, labour and state capacity that have accumulated from a series of overlapping and interlocking crises stretching across three decades.

The accumulation of surpluses is symptomatic of "globalisation." Changes in the forces, relations and geography of capitalist production during the past thirty years have produced more densely integrated "sovereign" national polities, exemplified by supra-national trade regions such as NAFTA and supra-national currencies such as the Euro. However, interdependence is not a precursor to universal equality. Quite the contrary, as Neil Smith argues, the trend towards equalisation rests on a deep foundation of differentiation; if the whole world is available as site or resource for capitalist production, intensive investment in some places to the detriment of others is ensured by and produces "uneven development." The disorderly effects of "globalisation" are part and parcel of uneven development, and the expansion of prison in the US is a logical, although by no means necessary, outcome of dynamic unevenness. But if economies lies at the base of the prison system, its growth is a function of politics not mechanisms.

Why 1968? Historiologing crime, Keynesianism, and crises
I have said that the 'moral panic' underlying prison growth achieved formal US-wide recognition in Nixon's 1968 'law and order' campaign. Mid-sixties radical activism, both spontaneous and organised, successfully produced widespread disorder throughout society. The ascendant Right's effort to gain the presidency used the fact of disorder in persuading voters that the incumbents failed to govern. The claim was true insofar as it described objective conditions. But in order to exploit the evidence for political gain, the Right had to interpret the turn itself as something it could contain, if elected, using already existing, unexceptionable capacities: the power to defend the nation against enemies foreign and domestic. And so the contemporary US crime problem was born. The disorder that became 'crime' had particular urban and racial qualities and the collective characteristics of activists (whose relative visibility as enemies was an inverse function of their structural lack of power) defined the face of the individual criminal.

A broad-brush review of some major turning points in political radicalism highlights who became the focus of moral panic. Given that criminalisation is most intensely applied to African Americans, it makes sense to start with the Black Power movement. Black Power became a popularly embraced alternative to assimilationist civil rights struggle in 1964, after the Democratic Party publicly refused to seat the Black Mississippi Freedom Democratic Party (MFDP) at the national convention. The delegation represented women and men who had engaged in deadly struggles with white power southern elites in order to gain the vote. While antisytemic bullets did not replace reformist bulletins with the emergence of Black Power, the MFDP experience convinced many activists who had worked within legal and narrowly (electoral) political systems that tinkering with the racial structure and organisational practices of the US state would not make it something new. In response to the plausible impossibility that Black or other subordinated people could ever secure equality within the framework of constitutional rights, below-surface militancy popped up all over the landscape.

Until the 1960s, virtually all riots in the US were battles instigated by white people against people of colour, or by public or private police (including militias and vigilantes, also normally white) against organising workers of all races. But, from the 1963 Los Angeles Watts Riots forward, urban uprising became a means by which Black and other people held court in the streets to condemn police brutality, economic exploitation and social injustice. Radical Black, Brown, Yellow and Red Power movements fought the many ways the state organised poor people's perpetual dispossession in service to capital. Radical white activists — students, wage workers, welfare rights agitators...
added to domestic disorders by aligning with people of colour; they also launched autonomous attacks against symbols and stronghold of US capitalism and Euro-American racism and imperialism.

Indeed, growing opposition to the US war in Vietnam and Southeast Asia helped forge one international community of resistance, while an overlapping community, dedicated to anti-colonialism and anti-apartheid on a world scale, found in Black Power a compelling renewal of historical linkages between 'First' and 'Third World' Pan African and other liberation struggles. At the same time, students and workers built and defended a new class of people in place like France, no sooner had the smoke cleared in one place than floods of revolt raged up in another. The more militant anti-capitalist and international solidarity became everyday features of US anti-racist activism, the more vehemently the fight was launched and the avatars responded by, as Allen Feldman puts it, 'individualizing disorder' into singular instances of criminality, that could then be solved via arrest or state-sanctioned killings rather than fundamental social change. With the state's domestic war-making in mind, I will briefly examine another key aspect of the legendary year.

Something else about 1968

If 1967-68 marks the domestic militant state's contemporary rise, it also marks the end of a long run-up in the rate of profit, signaling the close of the golden age of US capitalism. The golden age started thirty years earlier, when Washington began the massive build-up for the second world war. Ironically, as Gregory Hooks has demonstrated, the organisational structures and fiscal powers that had been designed and authorised for New Deal social welfare agencies provided the template for the Pentagon's painstaking transformation from a periodically expanded and contracted Department of War to the largest and most costly bureaucracy of the federal government. The US has since committed enormous expenditure for the first permanent warfare apparatus in the country's pugnacious history.

The wealth produced from warfare spending underwrote the motley welfare agencies that took form during the Great Depression but did not become fully operational until the end of the second world war. Indeed, the US welfare state bore the popular tag military Keynesianism to denote the centrality of war-making to socio-economic security. On the domestic front, while labour achieved moderate protections and entitlements, worker militancy was crushed and fundamental US hierarchies remained intact. The hierarchies map both the structure of labour markets and the socio-spatial control of wealth. Thus, while white people fared well compared with people of colour, most of whom were deliberately excluded from original legislation; men received automatically what women had to apply for individually, and, normatively, urban, industrial workers secured limited wage and bargaining rights denied household and agricultural field workers.

The military Keynesian or 'warfare-welfare' state (to use James O'Connor's term) was first and foremost, then, a safety net for the capital class as a whole in all major areas: collective investment, labour division and control, comparative regional and sectoral advantage, national consumer market integration and global reach. And, up until 1967-68, the capital class paid handsome protection premiums for such extensive insurance. However, at the same time that Black people were fighting to dismantle US apartheid, large corporations and other capitalists, with anxious eyes fixed on the flattening profit-rate curve, began to agitate forcefully and successfully to reduce their contribution to the 'social wage'. Capital's successful tax revolt, fought out in federal and state legislatures, provoked the decline of military Keynesianism.

Put broadly, the economic project of Keynesianism consisted of investments against the tide, designed to avoid the cumulative effects of downward business cycles by guaranteeing effective demand (via incomes programmes, public borrowing strategies and so forth) during bad times. The social project of Keynesianism, following from the central logic that full employment of resources enhances rather than impedes the creation of new wealth, was to extend to workers - except, as we have seen - protections against calamity and opportunities for advancement. In sum, Keynesianism was a capitalist project that produced an array of social goods that had not existed under the preceding liberal (or laissez-faire) capitalist state form.

Keynesianism's economic project, severely weakened by capital's tax revolt, encountered its first round of dismantling in the early 1970s, but the social project took the rap for all the anxiety and upheaval that ensued. Part of the post-war civil rights struggle had been to extend eligibility for social welfare rights and programmes to those who had been deliberately excluded. The individualisation of this disorder (from the 1965 Moynihan report on the pathological Black family, through the 1980 Reagan presidential campaign) increasingly startled an uneasily African American woman whose putative dependency on the state, rather than a husband, translated into criminality.

Crisis and surplus

To sum up: there is a moral panic over 'crime' - civil disorder, idle youth on the streets, people of colour out of control, women and children without husbands and fathers, students who believe it is their job to change the world (not merely to understand it) and political alliances among organisations trying to merge into full-scale movements. In other words, there is a social crisis. And there is also an economic panic...
capital disorder, or the profits crisis. These crises collide and combine into the crisis that prison 'fixes'.

The new state emerging from the crises, and materialised as the integration of the prison industrial complex, is neither unexpected nor without roots. Rather, the US state (from the local to the national) can claim permanent ideological surplus in the realm of 'defence'. Indeed, from the genocidal wars against Native Americans to the totalitarian chattel slavery perpetrated on Africans, to colonial expansion, to the obliteration of radical anti-racism and anti-capitalist movements, the annals of US history document a normatively aggressive, crisis-driven state. Its modus operandi for solving crises has been the relentless identification, coercive control, and violent elimination of foreign and domestic enemies.

Crisis and surplus are two sides of the same coin. Within any system of production, the idling, or surplusing, of productive capacities means that the society dependent on that production cannot reproduce itself, as it had in the past, to use Stuart Hall's neat summary of Marx. Such inability is the hallmark of crisis, since reproduction, broadly conceived, is the human imperative. Objectively, crises are neither good nor bad, but crises do indicate inevitable change, the outcome of which is determined through struggle. Struggle, like crisis, is a politically neutral word: in this scenario, everyone struggles because they have no alternative.

The economic panic deepened in the early 1970s, at the same time that radical political activists were assassinated, went to prison, disappeared underground, or fled into exile. In 1973, the federal government finished its five-year plan to decouple the dollar from gold and immediately thereafter devalued the dollar, showing the US to the 1973-7 global recession. The 1973 wage freeze was prelude to a twenty-five year decline in ordinary people's real purchasing power, made frantic as workers tried to buy necessities and devolved greenbacks. During the same period, of course, money began its spectacular rise as the contemporary commodity (in echo Paget Henry's injection), and interest brokering displaced productive investment as the means to make money make more of itself.

The mid-1970s recession produced many other kinds of displacements, related to the movement of dollars away from gold and capital away from production. Steep unemployment deepened the effects of high inflation for workers and their families. Big corporations eliminated jobs and factories in high-wage heavy industries (e.g., auto, steel, rubber), decimating entire regions of the country and emptying cities of wealth and people. Even higher unemployment plagued farmworkers and others who laboured in rural extractive industries such as timber, fishing and mining. Landowners' revenues did not keep up with the cost of money for a variety of reasons related to changing production processes and product markets, as well as seemingly 'natural' disasters. Defaults displaced both agribusinesses and smaller growers and other kinds of rural producers from their devalued lands, with the effect that land and rural industry ownership sped up the century-long tendency to concentrate.

Urban dwellers left cities, looking for new jobs, for cheaper housing (given the inflated cost of houses and money), or for whiter communities, and suburban residential and industrial districts developed at the same time that city centres crumbled. Those left behind were stuck in space, lacking the social or financial mobility to follow capital, while at the same time international migrants arrived in the US, pushed and pulled across territory and state by the same forces of equalisation and differentiation that were producing the US cataclysm.

The sum of these displacements was socialised, in a negative way, by the state's displacement from its Keynesian job to produce equilibrium from profound imbalances. No central, strategic plan emerged to employ the state's capacities and absorb the national surpluses of finance capital, land or labour. And why would there be, since the scale at which military Keynesianism operated - that of the nation state - was approaching political-economic obsolescence in the late twentieth century round of globalisation. Make no mistake: I do not mean 'the state' was withering. Quite the contrary, the nation was being 'prepped' for global developments by operators firmly ensconced in state institutions, such as the Federal Reserve Bank governors who, as Edwin Dickens argues, powerfully insisted that the state's capacity to discipline labour was politically and economically more important than the state's capacity to guarantee labour a decent share of surplus value. The unabsorbed accumulations from the 1973-7 recession laid the groundwork for additional surpluses idled in the 1981-8 recession and again in 1989-92, as the various integration of some worlds produced the terrifying disintegration of others.

Dateline California

California passed the trillion (million million) dollar Gross State Product (GSP) mark in 1997, a level nominally equal to the GDP of the entire United States in 1970. However, the wealthy and productive State's family poverty rate more than doubled between 1969 and 1995, rising from 8.4 per cent to 17.9 per cent of the growing population. Indeed, in 1995, California's national poverty ranking was eighth from the top, in company with historically poor states such as Louisiana, New Mexico, Mississippi, West Virginia and Kentucky; with rich New York and Texas, where prisons have also expanded significantly, and with the classically bifurcated District of Columbia, that has both the highest per capita income and second highest poverty in the country.
Throughout the golden age of capitalism, California functioned as what Dick Walker calls a 'principal engine of US economic growth', and used resources from defence-dependent prosperity to provide state residents with broadening opportunities. An indicator of change to come was the 25 per cent increase in children's poverty between 1969 and 1979. This abandonment of the least powerful members of society presaged the State's future broadening abdication of responsibility to remedy adversity and inequality. And, in fact, the child poverty rate jumped again, rising 67 per cent between 1979 and 1995, to shape the future chances of one in four of the State's kids.

California's phenomenal rise in family and child poverty is a dynamic symptom of the displacement characterising the 1970s, 1980s and 1990s recessions - dynamic because the negative effects have compounded even in boom years. The surprising of California's children goes hand in hand with the accumulation of other surpluses.

* Finance capital. California experienced a dual shift in income. First, property income increased as a share of total income, the other principal components of which are wages and salaries. Second, interest income increased as a share of property income, the other components of which are dividends, rent and profits. Productive capitals in the State started paying for equipment or factory expansion out of retained earnings (profits not paid out to shareholders as dividends). In these circumstances, finance capitals had to scramble for new profit-making opportunities, and increasingly looked to money itself, rather than steel, cars or aircraft, to do the job.

As a category of capital, finance capital is the most mobile, but the actual firms that specialise in matching borrowers with funds operate in particular political economic geographies. Spatial constraint is abundantly clear in the US realm of public debt: all borrowing done at the State or municipal level is, by federal law, State-regulated. For California firms specialising in public sector finance, the challenge to find governmental borrowers was further complicated because traditional infrastructural investment (school buildings, highways and roads) had been deferred during the long 1970s recession, while thereafter both State and local officials depleted reserves rather than ask short-tempered, wage-frozen taxpayers to approve new debt obligations. In sum, public sector financiers had a crisis - growing pools of investable cash but shrinking outlets - that could only be resolved in the political arena, where decisions about the legitimate uses of public debt are made by voters, legislators and other interpreters of existing statutes.

* Land. California's patterns of land use have changed significantly during the past thirty years. Most notably, since 1978, about 100,000 acres per year of irrigated farmland have been taken out of production. The fate of these idled farmlands stands as proxy for rural restructuring.

From military Keynesianism to post-Keynesian militarism 181
number of unemployed persons, plus the annual number of prisoners, is about one million. These million constitute the empirical minimum of California’s relative surplus population, or surplus labour.

The reorganization of labour markets has expelled from the workforce modestly educated people in the prime of life who once might have gained their wages making and moving things. African American men are first among the dispossessed in this regard, although many kinds of workers are experiencing something close to permanent redundancy. Underemployment and worklessness are higher among men than women of similar demographic profile. The lower a person’s income, the more likely she or he is to have been unemployed. In urban space, high unemployment rates correspond to areas with the greatest school dropouts, which in turn map onto areas that industries have abandoned, taking along their own jobs and local jobs dependent on the dollars circulated by the bigger firms. Of course, these dynamics are not simply the residual outcomes of ‘market forces’, but rather, the predictable results of capital abandonment facilitated by what Michael Tonry calls the State’s ‘malign neglect’.

State capacity As stated earlier, the Keynesian state came under sustained attack from powerful economic and political critics. Marx observed that tax struggle is the oldest form of class struggle. The tax revolt staged by California capitalists in the late 1960s was answered by the legendary homeowners (i.e., the state’s) tax revolt of 1978. And finally, starting in the early 1980s, the federal government reduced its participation in State and local government funding of social programmes, thereby passing along to lower-scale jurisdictions the task of making up for federal tax cuts that had been granted to capital and rich individuals. California was left with the technical ability to do all kinds of things: raise money and spend it, pass laws and enforce them. But it lacked the legitimacy to renovate the old military Keynesian projects by, for example, putting inner-city and rural youth to work, or expanding and improving educational opportunity, or buying firms that threatened to leave and making them community-owned cooperatives.

In this historical context, old markets—certain fractions of finance capital, land and labour were dying, while new ones had not yet been born that might absorb the surpluses. For California, the outcomes of tax struggles translated into delegitimization of programmes the state might have used to put surpluses back into work, while at the same time the state retained bureaucratic, fiscal and legal apparatuses from the golden age. In other words, the massive restructuring of the state’s tax base in effect surplus the Keynesian state’s capacities. However, the state did not disappear, just as surplus workers or land or other idled factors of production do not disappear. Rather, what withered was the state’s legitimacy to act as the Keynesian state. The state’s crisis, then, was also a crisis for persons whose rights and entitlements would be surplused from the state; how absolutely would they be abandoned, and would their regulation take new forms?

The post-war pragmatic era unevenly bestowed on labour was transferred, with an icing of solicitude, to capital. The state at all levels focused on capital’s needs, particularly on how to minimize impediments and maximize opportunities for capital recruitment and retention. However, having abandoned the Keynesian full employment aggregate guarantee approach to downturns, the power bloc that emerged from the 1980s onward faced the political problem of how to carry out its agenda—how, in other words, to go about its post-Keynesian state-building project in order to retain and reproduce victories. Capital might be the object of desire, but voters mattered. The new bloc, having achieved power under crisis conditions, consolidated around a popular anti-crime campaign that revived Richard Nixon’s successful law and order pitch. Thus the state rebuilt itself by building prisons fashioned from surpluses that the emergent post-golden-age political economy was not absorbing in other ways.

The prison fix

A final blow to ‘golden-age’ activism was the end of prisoners’ rights movements. In concert with their counterparts elsewhere, California’s radical prisoners framed their activism in terms of their economic, political and racial lack of power, and challenged the class nature of the state’s cage-based social control. But, at the same time, many prisoners fought in federal courts for reform; they used constitutional law to compel the State to improve prison conditions and to stop giving people indeterminate (i.e., one-year-to-life) sentences. Federal court-ordered successes formed the basis on which California began to revise the purpose and design of the system. However, by changing its sentencing structure and pledging to remedy overcrowded and decrepit facilities, the State paved the way for expanding, rather than surpassing, its capacity to put people in cages.

The limit to any reform, as Angela Y. Davis and others consistently argue, is the system itself: reform tends to strengthen institutions, especially those geared to social control. At first, California planned simply to replace decrepit facilities with small (500 person) new ones. However, that plan never materialized. Instead, new power blocs (which took office in 1982 using a strategy similar to Nixon’s 1968 ‘law and order’ campaign) used the improvement plans as a template for the ‘megaprisons’ that have since been built.

Once the State embarked on the prison construction project, the problem of funding surfaced immediately. In the flush of victory, the newly ensconced post-Keynesian power bloc persuaded voters that if crime was the problem (as electioneers had promised) prison was the
In the long run, we're all deal

As have already noted, California's State budget has grown since the 1970s, while voters have reduced their participation. An enormous and growing portion of the state's budget is spent on prison construction and maintenance. One way to fund this portion of the state's budget is to raise taxes, and California has passed a number of tax measures in recent years to support prison construction and maintenance.

Throughout the 1970s, inflation and population growth led to increased costs for state prisons and correctional facilities. To meet these costs and other demands on the state's budget, California has increased taxes and fees on a variety of goods and services. In recent years, the state has also begun to rely more heavily on private vendors to provide services that were previously provided by state agencies, such as food and housing for inmates.

In recent years, there has been significant controversy over the costs and benefits of California's prison system. Some advocates argue that state prisons are too expensive and that they contribute to the cycle of poverty and crime by locking up non-violent offenders and those who are not likely to re-offend. Others argue that state prisons are necessary to maintain public safety and to protect victims of crime.

In any case, California's State budget has grown significantly since the 1970s, and the state continues to struggle with the costs and benefits of its prison system. As the state moves forward, it will need to carefully weigh the costs and benefits of its prison policies and make decisions that will affect the lives of thousands of inmates and their families.
and injuries as well. Capitalists are, of course, trying to get a foothold in this lucrative market, where 95 per cent of US prisons and jails are now publicly owned and operated. Alternatively, all prisoners might well be required to work in the public sector, both to pay their own costs and to make profit for the state, as was the case in prisons of the US South starting at the turn of the twentieth century. In such an eventuality, wide-scale slavery, under the provisions of the Thirteenth Amendment to the US constitution, could be the big state's answer to tax struggle. We might think of public sector slavery as the 'crime tax', part of the 'surplus labour tax', whose freewheeling (non-prison) variation is workforce, or the 'poverty tax'. Thus we return analytically to the class struggle inherent in tax struggle. But this return takes us to a new place, if we understand from the 'surplus labour tax' that prisoners and other dispossessed persons are at the centre (rather than under or marginal to) the contradictions by which the system moves.

In sum, military Keynesianism emerged from the profound crises of the Great Depression, when dislocations and reconfigurations of capital, land, labour and state capacity restructured capital-labour relations and remapped the world, with California, in some key ways, first among first. Military Keynesianism came out of the same objective conditions that had produced Nazism and Fascism. In the current period of globalisation, we see the demise of military Keynesianism, and its successor military state rising on the firm foundation of prisons, populated by the 3,000,000 and more who represent both the demise of golden-age capitalism and the defeat of alternative sociocultural movements, throughout the golden age, by those who sought to make impossible the future we live today. But, before we're all dead, alternative global activism, matured by thirty years of mortal lessons, might rise to tear down the sturdy curtain of racism behind which the prison industrial complex devours working men and women of all kinds.

Notes

My special thanks to Craig Timmis.

1 'State' with an upper-case 'S' designates a specific political geography or government (such as the State of California); state with a lower-case 's' designates the general political-territorial form (the rising prison state) that ranges, in scale, from municipality to nation state.

2 Prisoners are classified according to their 'controlling' or most serious conviction. Thus, the more than 8,000 people in CDC custody for 'petty theft with priors' did not commit other, more serious crimes, such as robbery.

3 The law is critical; gang membership designation allows prosecutors to demand longer, fixed sentences for dealers, and local law enforcement throughout California has conducted a census of gang membership so zealously that, in at least one city, according to Mike Davis, 'the police enumerated more gangsters between the ages of 18 and 25 than were actually resident in their jurisdiction.'

4 The cohorts refer, respectively, to African, Latino (especially Chicano/a and Puerto Rican), Asian American and Native American groupings.

5 Outlined in the scope of this essay is a discussion of two key themes. One concerns how the US also built into the legal landscape a notably high tolerance for homicide, by defining 'self-defense' so broadly that today the 'average American' believes it is a human right to kill over property or insult as well as to remedy greater perceived wrongs. An extra-surprising twist consists exclusively of incidents in which white men killed white men. The law therefore establishes norms that fix particular relationships among gender, race, citizenship, and power (see Brown, 1991). The second key theme concerns violent differentials between nation states, and the role of victorious war-making in modeling civilian behaviour in the US (Archer and Gartner, 1994).

6 Of course there are multi-State and multinational finance capital firms; but, deal by deal, they do their business in places, not in undifferentiated space. No matter how quickly value can be transferred between currencies and politics, each accounting moment occurs in, and by virtue of, a jurisdiction. Thus, when Lerner brought down Barings Bank (that accumulated much hotel in the nineteenth century lending money to US cotton plantations worked by slaves), he fled Singapore, not St. Thomas, to evade punishment.

7 The decline in the price at which the land might sell, especially compared to the rising price of inchoateable plots.
